

# PIXAR ANIMATION STUDIOS: FINANCIAL PORTFOLIO REPORT

Presented by Peter Nguyen

# EXECUTIVE SUMMARY & APPROACH

Dashboard 1 (Financial Performance & Movie Reviews): Focuses on fiscal accounting, tracking individual movie profitability, production budgets, global box office revenues, Return on Investment (ROI) metrics, and critical awards.

Dashboard 2 (Genre Trends & Subgenre Dynamics): Explores box office over time, genre performance distributions, scatter-plot profitability matrices, and high-grossing subgenre breakdowns.

# EXECUTIVE SUMMARY & PROJECT APPROACH

This project harnesses Power BI to deliver a financial evaluation of Pixar's feature film portfolio. The primary objective is to analyze historical movie metrics that includes production budgets, box office gross distributions, award recognitions, release timelines, and subgenres into an interactive, data-driven narrative.

---

# DASHBOARD 1 ARCHITECTURE: FINANCIAL PERFORMANCE & CORE METRICS

- **Key Performance Indicators** (KPIs): Instant summary blocks evaluating studio metrics, including total net profit, global box office distributions, and aggregate production investment.
- **Tiered ROI Conditional Formatting:** To translate numerical percentages into financial conclusions, a custom 3-tier conditional formatting system was deployed on the Worldwide ROI column:
  -  **High Positive ROI** (>100%): Highlights major commercial blockbusters.
  -  **Moderate ROI** (0% to 100%): Identifies solid, profitable returns.
  -  **Negative ROI** (<0%): Flags financial losses.
- **Interactivity & Slicers:** Equipped with a genre filters, a multi-year timeline slider, and number of awards, selecting an individual film dynamically adjusts the entire page to reflect the film-level budgeting and revenue figures.

# DASHBOARD 2 ARCHITECTURE: TRENDS, GENRES, & SUBGENRE DYNAMICS

- **Box Office Evolution (1995–2024):** A line chart tracking worldwide box office performance over time, highlighting peak gross revenue.
- **Genre & Subgenre Performance Bar Charts:** Comparative horizontal bar charts analyzing average gross revenues across primary genres (leading with Drama at an average of \$0.81bn) and subgenres (leading with Teen Drama at approximately \$1.7bn).
- **Profitability Scatter Matrix:** A multi-variable scatter plot maps Box Office Worldwide against Worldwide ROI, separated the Box Office Average and ROI Average. This visual highlights genres that achieve both high gross earnings and exceptional ROI.
- **Dynamic Insights Panel:** A summary provides key analytical takeaways, highlighting that financial returns are heavily concentrated in specific categories rather than evenly distributed over the years.

# KEY BUSINESS INSIGHTS & STRATEGIC CONCLUSIONS

- **Blockbuster Dependency vs. Portfolio Stability:** Pixar's financial success (\$13bn net profit on \$4bn budget) is driven by top-tier franchise sequels (Toy Story & The Incredibles) and select original masterworks (Toy Story, Finding Nemo and Inside Out 2) that achieve Green-tier ROI status (>100%).
- **Genre Profitability Concentration:** While family and adventure films form the backbone of total box office volume, niche narrative categories like Teen Drama demonstrate staggering average gross returns when successfully executed.
- **Critical and Commercial Alignment:** The analysis between award counts and box office revenues confirms that critical acclaim (Academy Award wins) shows some correlation with high gross yields.
